Custom SUCTION SERVICE HOSE
Salem-Republic Suction Hose can be made with a variety of high grade tube material. These feature abrasion and cut resistant premium grade rubber linings to withstand the destructive action of sand and gravel from quarries and beaches, rock and sludge from channels and harbors, coral from the sea.

In addition to the wire helix found close to the thick tube, multi-ply of polyester, nylon or cotton duck fabric are used to reinforce the hose carcass to form an extra-heavy wall that absorbs shock and vibration between cutter head and pumps. (These hoses can be custom-engineered to provide the bend radius you need.)

Salem-Republic’s Suction Hose is supplied with a number of cover choices, including SBR, EPDM or neoprene, to meet your most exacting need for wear resistance and protection from sunlight and ozone.

Dredge Pipe SLEEVES
SBR’s Dredge Sleeves are unsurpassed for quality and stability. SBR sleeves will not expand under pressure causing clamps to loosen. The same high-quality custom-blended compounds found in SBR’s suction and discharge hoses are used in SBR’s dredge sleeves. Salem-Republic does not use a ply “rating” system. The number of plies stated for any size are by actual count.

GIMBAL joint hose
SBR Gimbal Joint Suction Hoses are used in universal joints or gimbals which constrain hose movement in two planes. This provides controlled bending with problems of overstressing eliminated. Available in up to 42-in. I.D., the Gimbal-type hose features imbedded welded steel rings for maximum compressive strength and flexibility.

Rubber-encapsulated high tensile steel wire helix
Rubber-impregnated high tensile steel wire end-wraps
Cut-resistant, abrasion-resistant cover
Bias - Multi-ply synthetic fabrics assure maximum tensile strength and ability to absorb shock and vibration.

CUSTOM ENGINEERED DREDGING SOLUTIONS

Suction • Discharge • Sleeves • Gimbals

Salem-Republic Rubber Company

Foremost Large-Bore Dredge Hose Manufacturer in America!
Salem-Republic’s Dredging Hose features “customized” heavy-duty, wear-resistant constructions employing the finest grades of natural and synthetic rubber and fabric. Produced in hard- and soft-wall constructions, SRR’s premium Dredging Hose is the product of many years of experience in handmade hose design and manufacturing.

SRR engineers and manufactures the complete hose assembly from formulation of all rubber compounds to vulcanizing the finished hose. This is your assurance that all raw materials used in production are compatible with each other and most suitable for the intended use of the hose.

If your requirements include flexibility, stability, vibration damping or resistance to abusive handling, special ends or no ends at all...call Salem-Republic Rubber Company.

**SUCTION**—SRR’s tough hard suction hose features a custom-blended rubber lining that resists the most severe cutting and abrasive action. Spring steel helix wire with multiple synthetic textile reinforcement provides for full vacuum, kink resistance, and vibration damping.

**DISCHARGE**—Hard-wall (SDH) and soft-wall (SDS) stern discharge hose are designed to meet your needs. Hard-wall where bend radius is controlled...Soft-wall where kinking is unavoidable.

**SLEEVE**—Only the best...SRR’s unique construction includes use of nonwicking...high tensile synthetic tire cord. Not “ply ratings”—the number of plies stated is actual count. (see back cover)

**GIMBALS**—Specifically designed for existing specifications for individual dragarm hopper dredges. (see back cover)

**CUSTOM ENGINEERED, HANDMADE DREDGE HOSE...Designed and built for survival from abrasive wear and abusive handling**

**SDH Hard-Wall DISCHARGE HOSE**

SRR’s SDH Hard-Wall Discharge Hose employs a wires helix with multi-ply-reinforcing fabric. The helix construction, which also permits use for suction service, offers the dredge operator a discharge hose that stays round through normal bend radii. This affords extended service life over soft-wall hose, which is susceptible to ovaling out. Operating pressures up to 400psi are standard with a 4:1 safety factor.

Available with numerous options, including special diameters, lengths, and cover materials. SRR’s SDH Hard-Wall Discharge Hose helps to reduce dredge downtime by minimizing maintenance problems.

**SDS Soft-Wall DISCHARGE HOSE**

The SDS Dredge Discharge hose is designed for operating pressure up to 400psi. The SDS hoses are handmade and can be provided with flanged ends, enlarged ends (to easily slip over pipe stubs), or plain cut ends.

**Soft-Wall Construction**—Recommended for use where hose kinking can otherwise cause premature failure. SRR soft-wall discharge hose will oval out, but springs back under working pressure.

**Hose Cover**—SRR rubber, EPDM or neoprene is available to meet custom requirements for cut and abrasion resistance, and to withstand strong sunlight and ozone. SRR will provide a tough neoprene cover for salt-water service, and where it will be exposed to long periods of sunlight.

**Optional Tube Lining Thickness**—to meet special needs of materials being handled, hose diameter and service conditions. SRR’s compounds are formulated to meet abrasion and cutting. **Custom Cover**—supplied with ozone-resistant SBR, EPDM or neoprene for added resistance to ozone and sunlight.

**Custom Lengths**—to 50 ft., diameters to match pipe I.D.’s or O.D.’s up to 42”.

**Custom Ends**—straight or enlarged to fit your pipe size or any of the flanged ends shown on back page.

**Made in the USA**
